If Adobe Acrobat Reader is not installed, the installation software will detect this and install it for you. If you do <u>not</u> have Microsoft Powerpoint already installed then you can install Powerpoint viewer software, to enable you to view this type of file. This is the format used for the help files that are contained within the software.

4) If you have **Internet Security** software installed, which includes a **Firewall**, You may see a Pop-up window at this point (as shown below). When prompted, click the **Grant Access** option.

Version 1.8 Windows XP or .NET serve	FläktWoods
Start Installation Information The installation for MSDE has been launched. Allow it to reboot if prompted, the setup will continue after the reboot. 	Once you have confirmed your login details please click the "Next" button below:			

Click "Confirm" after entering your User Name and Password, then "Next". Follow on screen prompts.

The Software main screen should then be displayed.

Note: If you are connected to the Internet, the software will confirm that you are "Online". If this shows "Cached", YOU WILL BE UNABLE TO RECEIVE UPDATES! Please seek help from Fläkt Woods UK.

Running the Fläkt Woods Group Selector

The Software can either be run by double clicking the desktop icon as shown below.

OR from the "Start Programs menu (as shown below).

Fläkt Woods Fan Selector Installation Instructions – Powerpoint Viewer

Should you wish to install the Powerpoint Viewer software (for example, if you do not have the full version of Microsoft Powerpoint installed) this can either be done as part of the main installation process by ticking the checkbox next to the "Powerpoint Viewer (Help Files)" option. See below.

Alternatively, the installation CD can be inserted and run for a second time, with ONLY the "Powerpoint Viewer (Help Files)" option checkbox ticked as shown below.

Click "OK" to continue.

Fläkt Woods Fan Selector Installation Instructions – Powerpoint Viewer

Once the Installation process has been completed, click the "OK" button.

The Powerpoint Viewer can now be used to view Help Files. To access help files choose the "**Help | Online Help**" option from within Fan Selector software (see below).

After a help file link has been clicked (for the first time), the Powerpoint viewer license agreement will be displayed. Click the "**Accept**" button to continue.

Fläkt Woods Fan Selector – Firewall Information

It is important to make sure that if you are using firewall software on your PC, that you allow the fan Selection Software to access the Internet. This is required to enable the fan selection software to receive updates.

What is a firewall?

A system designed to prevent unauthorized access to or from a private network. Firewalls can be implemented in both hardware and software, or a combination of both.

Firewalls are frequently used to prevent unauthorized Internet users from accessing private networks connected to the Internet, especially intranets.

All messages entering or leaving the intranet pass through the firewall, which examines each message and blocks those that do not meet the specified security criteria.

What Firewalls are available?

There are several solutions that can be installed to give Firewall protection on your PC. Some of the more common ones are:-

Windows XP In-built Firewall Zone Alarm Black Ice Defender Norton Internet Security / Personal Firewall McAfee Personal Firewall

How do I check my settings?

This is a difficult question to answer due to the number of different programs. As a guide however you need to look under areas relating to restricted programs or program access control. In these areas you should see a list of all programs that have been blocked or are allowed to access the Internet.

What should the settings be?

FLAKTWOODS.EXE WEBUPDATE.EXE

There are two applications that form the core of the fan selection software, both of these need to have access to and from the Internet. These are :-

Programs A	Access Server					
🔀 Group Fan Selector Ul	J	1	?	?		
🕜 WebUpdate.exe	1	1	2	?		

Fläkt Woods Fan Selector – Firewall Information

Windows XP Fire Wall Settings

Windows XP has a built-in Firewall that can be located within the **Control Panel**. We therefore suggest that you open the Firewall application (double-click on the icon) and review which programs are listed.

It is important that you make sure that a Program called "**WebUpdate.exe**" can access the Internet. Below we have shown a set of typical settings for reference. All you need to do is find "**WebUpdate.exe**" in the list and then put a tick in the checkbox next to it, which will then allow it to have Internet access to get updates for your Fan Selector software.

If "WebUpdate.exe" is not present in the list, click the "Add Program" button and browse option to find this file within the "C:\Program Files\FlaktWoods\Fan Selector" folder.

			OK	Cano	el

How do I know my program is updating itself?

Every time the Fan Selection software loads it will attempt to locate the latest update files.

The flashing WebUpdate icon within system tray, denotes that the Update process is active.

If this icon disappears immediately then WebUpdate is being blocked.
