### 1. Introduction

#### Dear Customer,

Thank you for choosing a HygroMatik steam humidifier.

HygroMatik steam humidifiers represent the latest in humidification technology.

They will impress you with their safety, ease of use and economical operation.

In order to operate your HygroMatik steam humidifier safely, properly and efficiently, please read these operating instructions.

Employ your steam humidifier only in sound condition and as directed. Consider potential hazards and safety issues and follow all the recommendations in these instructions.

If you have additional questions, please contact us:

#### Airtrend Ltd.-Gobrid. Ltd.

Kumanovska 14, 11000 Beograd Tel. +381 11 383 68 86, 308 57 40

Faks +381 11 344 41 13 E-mail: gobrid@eunet.rs

For all technical questions or spare parts orders, please be prepared to provide unit type and serial number (see name plate on the unit).

### 1.1 Typographic Distinctions

- preceded by a bullet: general specifications.
- » preceded by an arrow: Procedures for servicing or maintenance which should or must be performed in the indicated order.
- ✓ Installation step which must be checked off.

italics Terms used with graphics or drawings.

### 1.2 Documentation

#### Retention

Please retain these operating instructions in a secure, always accessible location. If the product is resold, turn the documentation over to the new operator. If the documentation is lost, please contact HygroMatik.

### **Versions in Other Languages**

These operating instructions are available in several languages. If interested, please contact HygroMatik or your HygroMatik dealer.

### 1.3 Directions for Use

The proven principle of heating water by the use of electric immersion heaters is exploited to generate steam. Using different tap water qualities or partial softened water (all humidifier types) or fully demineralized water / condensate water (only for humidifier type HeaterLine, HeaterCompact and HeaterSlim).

**Warning:** HygroMatik steam humidifiers emit steam with a temperature of 100° C. The steam may not be inhaled directly.

Only qualified and authorised personnel may operate the unit. Persons transporting or working on the unit , must have read and understood the corresponding parts of the Operation and Maintenance Instruction and especially the chapter 2. "Safety Notes". Additionally, operating personnel must be informed of any possible dangers. You should place a copy of the Operation and Maintenance Instruction at the unit's operational location (or near the unit).

The steam humidifier is not qualified for exterior application.

### 2. Safety Notes

### 2.1 Overview

These safety notes are required by law. They promote workplace safety and accident prevention.

### **Warnings and Safety Symbols**

The safety symbols below identify sections containing warnings about hazards or potential dangers. Please familiarize yourself with these symbols.

**Warning:** Failure to observe this warning may result in serious injury or death and/or damage to the unit.

**Danger, Hazardous Voltage:** Hazardous electrical current! Failure to observe this warning may result in injury or even serious injury or death.

**Warning:** Failure to follow these instructions may result in damage to the unit due to electrostatic discharge. The electronic components of the humidifier control are very sensitive to electrostatic discharges. In order to safeguard these components during installation and servicing, steps must be taken to protect against ESD.

**Reminder:** Materials and consumables must be handled and/or disposed of as required by law.

**Note:** Appears before explanations or cross-references which refer to other sections of the operating instructions.

### 2.2 Guidelines for Safe Operation

### Overview

Obey all safety notes and warnings present on the unit. In case of a malfunction, switch off the unit immediately and prevent a restart. Repair malfunctions promptly. After any repair work, have qualified personnel check the safe operation of the unit.

Use original spare parts only. Additional national safety regulations also fully apply to the operation of this unit.

This unit is not designed for the use by persons (also children) with limited physical, sensory and mental abilities - or without knowledge and experience. Unless they are supervised or trained by a person, who is responsible for their safety.

Supervise children in order to ensure that they will not play with the unit.

The unit is only allowed to work with connected steam hose that

safely leads the steam.

HygroMatik steam humidifiers are IP20-protected. Make sure that the unit is protected from drips in its installed location.

Installing a humidifier in a room without water discharge requires safety devices to protect against water leakages.

### **Accident Prevention Regulations**

Comply with the Accident Prevention Regulation Electrical Systems and Equipment to prevent injury to yourself and others.

### **Operation of the Unit:**

Do not perform any work which compromises the safety of the unit. Regularly check that all safety and monitoring devices are functioning normally. Do not remove or disable safety devices.

### Installation, Dismantling, Maintenance and Repair of the Unit:

Disconnect unit components from power supply prior to maintenance or repair work.

Attaching or installing **additional components** is permitted only with the **written consent** of the manufacturer.

#### **Electrical**

Work on the electrical system must be performed by qualified personnel.

Disconnect unit components from power supply prior to work.

It is not allowed to connect the unit to DC voltage supply.

In case of a malfunction in the electrical power supply, switch off the unit immediately. Use only original fuses with the appropriate amperage rating. Regularly check the unit's electrical equipment. Promptly repair any damage, such as loose connections, burned wiring or defective electrical insulation. After proper electrical installation or repair, test all safety mechanisms (such as grounding resistance).

### 2.3 Disposal after Dismantling

**Note:** The operator is responsible for the disposal of unit components as required by law.

### 3. Transport

### 3.1 Overwiew

**Note:**Proceed carefully when transporting the steam humidifier in order to prevent damage from rough or careless loading and unloading.

### 3.2 Transport Size and Weigth

| Type* | Heigth | igth depth |      | weigth |
|-------|--------|------------|------|--------|
|       | [cm]   | [cm]       | [cm] | [kg]   |
| HL 6  | 93     | 42         | 74   | 39     |
| HL 9  | 93     | 42         | 74   | 39     |
| HL 12 | 93     | 42         | 74   | 40     |
| HL 18 | 93     | 42         | 74   | 40     |
| HL 24 | 93     | 42         | 74   | 42     |
| HL 27 | 93     | 42         | 74   | 42     |
| HL 30 | 95     | 48         | 80   | 50     |
| HL 36 | 95     | 48         | 80   | 49     |
| HL 45 | 95     | 48         | 80   | 50     |

<sup>\*</sup> Dimensions and weigths can vary insignificantly

The heating element humidifiers type **HeaterLine 60-90** are double units - they consist of two separate units.

### 3.3 Packing

**Note:** Observe the symbols affixed to the box.

### 3.4 Interim Storage

Keep the unit dry and protect from frost.

# 3.5 Check for Complete and Correct Delivery of Goods

Upon receipt of the unit, make sure that:

- type and serial number on the name plate match what is in the purchasing and delivery documents,
- equipment is complete and in perfect condition.

**Note:** In case of damage during shipment and/or missing parts, immediately file a written claim with your carrier or supplier.

Time limits for filing freight claims with shipping companies are\*:

| Transport Company                | After Receipt of Goods |
|----------------------------------|------------------------|
| Mail                             | 24 hours at the latest |
| Rail                             | 7 days at the latest   |
| Truck and railway compa-<br>nies | 4 days at the latest   |
| Parcel Service                   | immediatly             |

<sup>\*</sup> Subject to change without prior notice.

### 3.6 Included in the Delivery

The delivery includes:

- Unit of the selected humidifier type including selected control.
- Water installation hose.
- Manuals for the steam humidifier and the control.
- Ordered accessories (steam manifold, steam hose, condensate hose, etc.).
- Maintenance o-ring set for steam cylinder.

### 4. Operation and Installation

#### 4.1 Mode of Action

### The Imersion Heater Principle

One to five heater elements (8) are placed in a closed cylinder and connected to alternating current. The cylinder (9) is filled with tap water, fully demineralized water or partially softened water. Heat generated by the heater elements increases water temperature to approx. 100°C.

When fully demineralized water is used, the feed water is practically free of minerals. This ensures long life for the cylinder and heater elements since virtually no mineral deposits can settle or build up. Fully demineralized water minimizes the number of service / maintenance checks.

When tap water is used, some of the minerals dissolved in the water will settle in the cylinder as solids of various compositions. Most of these scale deposits are removed by periodic flushing or use of a heavy-duty blow-down pump. See section "Servicing During Operation with Tap Water".

The generated steam has a temperature of about 100°C and minimal positive pressure ("pressureless" steam). It is virtually demineralized and germ-free.

### 4.2 Installation and Method of Operation

By pressing the control switch ("Pos. I") the humidifier will be turned on.

When the hygrostat or controller signals a demand for humidification, the inlet solenoid valve (14) opens. The solenoid valve is designed for pressures from  $100 \times 10^3$  to  $100 \times 10^4$  Pascals (1 to 10 bar).

Water is fed into the cylinder (9).

The water level in the cylinder must be maintained within a specified range. If the water level is too high, the ellbow acts as a safety overflow for water drainage. If the water level is too low, it could cause the heater elements (8) to overheat. Therefore, power supply to the heater elements is shut off when water levels are too low.

The cylinder water level is controlled by a level control (6). The level control consists of a stainless steel cylinder with two float switches and three reed contacts. The float switches indicate the water level in the steam cylinder: "Dry Run", "Humidification" and "Max. Level". The control capsule is pressure-equalized.

At the standard setting, the inlet solenoid valve (14) opens when the water level remains below "humidification" level for 10 seconds. The water level then rises again to "humidification" level.

| Position | Discription                        |  |  |  |  |  |  |  |
|----------|------------------------------------|--|--|--|--|--|--|--|
| 2        | Steam hose adapter                 |  |  |  |  |  |  |  |
| 3        | Connection control capsule         |  |  |  |  |  |  |  |
| 4        | O-ring, steam hose adapter         |  |  |  |  |  |  |  |
| 5        | Cover, cylinder                    |  |  |  |  |  |  |  |
| 6        | Control capsule / Water level      |  |  |  |  |  |  |  |
|          | control                            |  |  |  |  |  |  |  |
| 7        | Clamping ring                      |  |  |  |  |  |  |  |
| 8        | Electrical Heater                  |  |  |  |  |  |  |  |
| 9        | Cylinder                           |  |  |  |  |  |  |  |
| 10       | Blow-down pump                     |  |  |  |  |  |  |  |
| 11       | Base                               |  |  |  |  |  |  |  |
| 12       | strainer insert                    |  |  |  |  |  |  |  |
| 13       | O-ring, base                       |  |  |  |  |  |  |  |
| 14       | Water inlet solenoid valve         |  |  |  |  |  |  |  |
| 15       | O-ring, base                       |  |  |  |  |  |  |  |
| 16       | Pressure plate for heater elements |  |  |  |  |  |  |  |

For more information, also see section "Exploded View."

The steam cylinder (9) is made of stainless steel. The cover (5) is attached to the steam cylinder using a clamping ring (7). Up to 5 heater elements (8) are mounted on the cover.

The heater elements are equipped with a mechanical high temperature safety. This mechanism provides a redundant safety system in the event of excessively low water levels ("Dry Run").

The cylinder water is periodically flushed out with a heavy-duty blow-down pump (10). Hygromatik's SUPER FLUSH system effectively assists this operation. The SUPER FLUSH mechanism generates a strong whirlpool effect in the strainer basket which aids removal of scale deposits during the blow-down process. During this procedure, steam production is interrupted for a few minutes.

Steam is fed into air-conditioning ducts through special steam hoses and steam manifolds. Under normal conditions, this steam has virtually no heating effect on the air to be humidified. Accumulated condensate can be returned to the steam cylinder via a condensate hose.

Direct room humidification (without ducts) is performed using fan units (with blower and nozzle). The steam generator is connected to the fan unit with steam and condensate hoses.

Steam lines in steam bath cabins employ special steam hoses and piping (if required). Accumulated condensate is normally routed into the steam cabin. At a relative humidity of 100%, the supplied steam is used to heat the steam bath.

For maintenance the cylinder can be drained by pressing the control switch "Pos.II".

### 4.3 Internal Output Setting

Continuous control of the HeaterLine Type steam humidifier is achieved by proportional control (pulse-width modulation) of the heater elements. In this way the humidifier can be proportionally operated across the entire output range of 5% - 100% nominal capacity.

### 5. Mechanical Installation

**Warning**: Installation of this unit should be performed by qualified personnel only. Hygromatik accept no liability for damage due to faulty installation.

Obey all safety instructions and warnings on the unit. During installation the unit must be disconnected from its power supply.

Accessory equipment may not be installed on or in the unit without prior written consent from HYGROMATIK. Otherwise the warranty is void.

**Warning:** If the installation of this unit is attempted by only one person there is a risk that the unit will drop down. We propose to carry out the installation by two persons.

# 5.1 Steam Humidifier - environmental conditions

**Note:** When selecting the location for steam humidifier installation, be aware of the following:

- Ambient temperature must be between +5 and +40 °C.
- Relative humidity may not exceed 80% RH.
- Observe clearances specified in the diagrams below to ensure adequate ventilation.
- An Installation in a closed room requires aeration and if neccessary temperature conditioning in order to reach the above mentioned environmental conditions.
- HygroMatik humidifiers are not suitable for direct outdoor installation.
- Install the steam humidifier as close as possible to the steam manifold. Use only short lengths of steam and condensate hose to ensure optimal performance.
- Hoses must be laid at a constant 5-10% grade to uniformly prevent sags and kinks.
- The back surface of the steam humidifier heats up during operation (to max. 70°C). Take care that the construction on which the unit is mounted is not made of temperature-sensitive material.
- Place the steam humidifier so that the unit is easily accessible with sufficient space to perform maintenance.
- The unit's protection class is IP20.

### 5.1.1 Fitting Measures

### **Wall Distance**

(all dimensions in mm)

**Note:** It is often advantageous to use existing water connections (feed and drain) when selecting the steam humidifier.

### **Wall Mounting**

**Note:** To function properly the steam humidifier must be installed vertically.

Measures for drills for wall mounting please see table (measures d and e) in chapter "Equipment Dimensions". If there is no suitable wall, it is recommended that the equipment is installed on brackets which can be embedded in the floor.

### 5.1.2 Equipment Dimensions HL 06-45

|                      | HL 06-27 | HL 30-45 |  |  |  |

View from top

### 5.2 Fan Unit (option)

**Note:** The fan unit should be positioned to avoid drafts. A minimum height of 2 m is generally sufficient.

• Install the fan unit directly on a wall.

| Type          | Fan Unit  |  |  |  |
|---------------|-----------|--|--|--|
| HL 6          | VG 08     |  |  |  |
| HL 9          | VG 17     |  |  |  |
| HL 18 - 30    | VG 30     |  |  |  |
| HL 36, 45, 60 | 2 x VG 30 |  |  |  |
| HL 70, 80, 90 | 4 x VG 30 |  |  |  |

- The fan unit is installed above the steam humidifier.
- When using multiple fan units, do not exceed a maximum distance of 5 m from the steam humidifier.
- Observe the clearances specified in the diagrams below.

(all dimensions in mm)

Fan unit, wall installation

| Dimensions                                       | W [mm]       | 441  | 507  | 550 |
|  | H [mm]       | 171  | 171  | 171 |
|  | D [mm]       | 180  | 237  | 277 |
| Weight   | [kg]         | 4,5  | 6    | 7   |
| Sound Level (1m distance to the source on noise) |              | 50   | 57   | 59  |

### Warning:

- During operation and a soon afterwards the steam nozzle is hot! If touched this can cause burns to the skin.
- During operation the cross-flow fan rotates. Do not touch the fan during operation.
- During operation hot steam discharges from the nozzle. In the field of the visible steam cloud contact can cause burns to the skin.

### 5.3 Absorption Distance B<sub>N</sub>

The "absorption distance"  $(B_N)$  is defined as the distance from the steam feed to where the steam is completely absorbed in the treated air. Inside the absorption distance, steam is visible as mist in the air stream.

Condensation may collect on anything installed inside the absorption distance.

Although steam outside the absorption distance ( $B_N$ ) is completely absorbed, it is not yet evenly diffused in the duct. If you plan to install any parts or devices inside the absorption distance, such as sensors or elbows, we recommend increasing the absorption distance using the formulae below. The absorption distances required for certain installed fittings are distinguished by separate symbols and calculated as a multiplier of the absorption distance  $B_N$ .

| Absorption Distance  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|
| $B_N$  | for normal obstructions, such as sensors, ventilators, outlets |  |  |  |  |  |  |
| $B_c = (1,52) \times B_N$ for fine filters, heat registers       |  |  |  |  |  |  |  |
| $B_s = (2,53) \times B_N$  | for particle filters   |  |  |  |  |  |  |
| $B_d = (2,53) \times B_N$ for humidity sensors, duct humidistats |  |  |  |  |  |  |  |

The absorption distance has no fixed value, but depends on many factors. These are depicted in the absorption distance nomogram below.

### 5.3.1 Determining the Absorption Distance

To determine the absorption distance, the following parameters are required:

- Air humidity before humidification x<sub>1</sub> in g/kg.
- Air temperature after humidification t<sub>2</sub> in °C (with steam humidifiers the change in air temperature due to humidification may be disregarded t<sub>1</sub> or t<sub>2</sub>).
- Specific increase in humidity∆ x in g/kg (can be determined in the h,x diagram)
- quantity of steam introduced  $\vec{m}_D$  in kg/h.
- air speed w<sub>L</sub> in m/s in air duct
- Total length I<sub>D</sub> of the steam manifold installed in the air duct

Length  $I_{\rm D}$  of the usable steam manifold depends on the dimensions of the air duct. The length of the absorption distance can be reduced by using multiple steam manifolds (also see section on the steam manifold).

### Method:

Graphically determine absorption distance  $B_N$  using the absorption distance nomogram (also see Section "Absorption Distance Nomogramm"). Enter the value of the parameters enumerated above into the respective quadrants. The resulting point of intersection indicates the value of the desired absorption distance  $B_N$ .

|                                      | Notes:            |         |
|--------------------------------------|-------------------|---------|
| Air humidity before humidification   | x <sub>1</sub> :  | _[g/kg] |
| Air temperature after humidification | t <sub>2</sub> :  | _[°C]   |
| Specific increase in humidity        | △ <b>x</b> :      | _[g/kg] |
| quantity of steam introduced         | $m_{D}^{\circ}$ : | _[kg/h] |
| air speed t                          | w <sub>L</sub> :  | _[m/s]  |
| Total length of the steam manifold   | ln:               | [mm]    |

### 5.4 Steam Manifold

### 5.4.1 Notes on Installation

These notes are based on a homogeneous

### Horizontal installation of steam manifold

Standard steam manifold installation:

An even distribution of steam manifolds ensures a uniform steam distribution.

Please use the total hight of the duct!

Minimum distances in order to avoid condensation:

**Lmin** = **210mm**: distance , steam manifold - next steam manifold"

**L4min = 120mm:** distance "lowest steam manifold - duct bottom":**L5min = 120mm**: distance "highest steam manifold - duct ceiling"Installations depending on special designs of air ducts:

| Air duct          | Positioning o   | f stean   | n manif   | olds         | Sample                         |  |  |

Vertical installation of steam manifold

Steam manifold placement:

Horizontal installation of the steam manifolds is preferred. However, installation from below into the air duct is possible.

#### Note:

- Install the steam manifold horizontal with it ensure a clean steam out.
- Maximum allowable pressure in the air duct is 1200 Pa.
- On the return side, the maximum allowable negative air pressure is 500 Pa. Placement of the steam manifold on the supply side of the air duct is preferred.
- With high-pressure air-conditioning systems, the unit's drain hose system must be modified depending on the over pressure. When this is the case please consult HygroMatik.
- Install the steam manifold as close as possible to the steam humidifier in order to minimize steam loss through condensation.
- Depending on the design of the air duct, additional mounting of the steam manifold may be required. Shown installation and position dimensions are based on experimental values. Special environmental conditions could require adjustments.
- We note that the German Association of Engineers (VDI)
   Guideline 6022 specifies a water drain within the absorption distance inside the air duct.
- For steam bath applications: Install the steam manifold safe from contact with people in order to prevent injuries or burns. Do not install the steam manifold near a temperature sensor or inaccurate readings may result.
- Air flow rates over 3m/s can possibly lead to condensate drainage problems at the steam manifolds which may require adaptation measures.

### Length of steam manifold [mm]\*:

| I    | 220 | 400 | 600 | 900 | 1200 | 1450 |
|------|-----|-----|-----|-----|------|------|
| DN25 | Х   | Х   | Х   | Х   | Х    | Х    |
| DN40 | Х   | Х   | Х   | Х   | Х    | Х    |

<sup>\*</sup> special lenght on request

**Note:** At lengths of 600mm or more, steam manifolds are shipped with an extra alternative mounting fixture (Nut, M8) on the closed end.

The number and size of appropriate steam manifolds, as well the nominal width of their respective steam and condensate hoses, are found in the tables below.

### **HyLine:**

<sup>\*</sup> For units HL 6 - 12 and HC3-12 HygroMatik delivers one adapter DN40 / 25 (but not for SPA applications)..
\*\* For units HL 36 - 45 HygroMatik delivers one t-connector for separating the steam on

two steam manifolds.

<sup>\*\*\*</sup>HI 60.-90 are double units and consist of HI 30-45 units.

### 5.5 Cover Plate

HygroMatik flange plates may be used to neatly complete installation of the steam humidifier in the air duct.

Two-piece flange plates are available for the DN25 and DN40 steam manifolds.

flange plate DN25 E-2604260

flange plate DN40 E-2604410

### 5.6 Drill Pattern

### 5.6.1 Drill Pattern DN25 (not to scale)

**Note:** Due to variable print media the dimensions are not to scale.

### 5.6.2 Drill Pattern DN40 (not to scale)

**Note:** Due to variable print media the dimensions are not to scale.

#### 5.7 Steam Line

**Note:** When installing the steam hose, please pay attention to the following:

- The steam hose diameter may not be smaller than the steam outlet of the HygroMatik steam humidifier (do not restrict the cross-section, otherwise back pressure will increase).
- The steam hose must be without sags and kinks and be laid with a continuous slope of 5-10% (otherwise sags will be formed).
- The steam hose should be as short as possible. In case of lengths of over 5 m the hose should be insulated to avoid excess condensation.
- In the case that steam output is distributed on two steam manifolds the Y-pieces for the steam and condensate hose should be installed near the manifolds. If the installation is carried out in this way only one steam hose is necessary for the main part, the loss of condensate will be decreased. In deviation of this the y-piece that is delivered ex works with a humidifier type C45, HL36, HL45 should be installed near the humidifier.
- Depending on how the hose is laid, hose clips should be set at intervals of approx. 500 mm.
- Allow access to the steam hose, so that it can be inspected later.
- In case of straight lengths of several meters, it is recommended to place the steam hose in temperature resistant plastic pipe (40 mm dia for hose DN25; 60 mm dia for hose DN40) or to use copper pipe.
- Device output, steam line installation, and the duct influence of pressure condition in the duct. In an exceptional case this could mean to optimize the steam line installation.
- Only genuine HygroMatik hoses are capable of withstanding the operating conditions. Allow for minimum bending radii:

Steam hose DN 25: Rmin = 200 mm Steam hose DN 40: Rmin = 400 mm

### 5.7.1 Types of Installation

### Installation type 1

If the steam manifold is positioned higher than 500 mm above the steam humidifier:

- » Lay the steam hose at a height of at least 400 mm above unit and then connect to the steam manifold with a constant rise or fall.
- » Lay condensate hose with a slope to the steam cylinder.
- » Lay a loop as a vapor trap. The steam manifold must be at least 500 mm from the loop. Fill loop with water before commissioning the system.

### Installation type 2

If the steam manifold is positioned lower than 500 mm above the steam humidifier:

- » Lay steam hose at a height of at least 400 mm above unit and then connect to the steam manifold with a constant fall.
- » Lay condensate hose with a loop of 200 mm diameter (vapour trap) to the drain. The distance between vapour trap and steam manifold should have at least 500mm.

» Lay the loop of condensate hose 200 mm directly above the drain.

### 5.8 Condensate Hose

**Note:** When installing the condensate hose, please pay attention to the following:

**Warning:** To keep condensate from accumulating in the duct, make sure condensate can drain freely.

### Installation type 1

If the steam manifold is positioned higher than 500 mm above the steam humidifier:

- » Condensate can be led to the steam cylinder (alternative the condensate can led to an outlet). For that purpose please use a part set that is included in the ddelivery. The part set consists of component N1 (tpiece), N2 (hose clamps) and N3 (hose).
- » 1.: Remove yellow condensate plug (P) from manual drain hose (O). (The manual drain hose is normally used to drain the cylinder when there is no power supply for the drain pump.)
- » Lead the open end of the condensate hose through the hole in the top of the humidifier's cabinet.

2.: Note: Depending on the type of HeaterLine humidifier it is necessary to use one or two manifolds / condensate hoses. Therefor there are two type of connecting the condensate hose/s:

- » Using a HeaterLine humidifier type HL6/ HL12/ HL18/ Hl24 or HL27 (= 1 steam manifold required) the little stainless steeel tube (N2) is connect to the manual drain hose (O). Please use a clamp. 3.: Now the condensate hose is connected to the open end of the stainless steel tube (N2). To fasten the hose use a clamp.
- » Using a HeaterLine humidifier type HL30/ HL36/ or HL45 (= 2 steam manifold required) the middle outgoing of the t-piece (N1) is being used to be connected to the manual drain hose (O). Please use clamp 3.: Both open outgoings of the t-piece are now used to connect two condensate hoses that are coming from the steam manifoilds. Use clamps.

Connection condensate hose / hoses

Lay the condensate hose at an approximate incline of 5-10% to the steam cylinder connection fitting, to allow the condensate to drain freely.

**Note:** It is recommended to form a loop of 200 mm diameter as a vapour trap provided there is enough space. Possible operating noises can be reduced in this manner.

### Installation type 2

If the steam manifold is positioned lower than 500 mm above the steam humidifier:

- » The condensate must be drained separately.
- » To prevent steam loss, lay a loop at least 200 mm in diameter.
- » To ensure condensate drainage, place the loop (vapor trap) as far away as possible below the steam manifold connection.
- » The manual drain hose (O) must be closed with the stopper (P).
- » Place hose clamps at intervals of at least 500 mm, depending on how the hose is laid.

### 5.9 Steam Solenoid Valves

When humidifying a number of loads, which are to be controlled separately, using a single steam humidifier, steam solenoid valves can be included in the steam hoses. Valve control has to provided by the customer.

- Install the vertical risers with flow from bottom to top.
- The best position is just above the steam humidifier.

Installation of Steam Solenoid Valve

### 5.10 Chimney-compartment

Between electrical compartment (right side) and steam production compartment (left side) the chimney compartment is located. The chimney compartment is used to cool electronic components. For proper function make sure that the three holes in the top side of the housing are not covered - otherwise the heat removal is too low and a thermal cutout could be triggered.

### 5.11 Unit Installation Check

**Attention:** This unit may only be operated by qualified and properly trained personnel.

Please check the installation using the following list:

| ⊻ | Does unit hang vertically? |  |  |  |  |
|---|----------------------------|--|--|--|--|
|   | A 11 12 ( ( (1 2)          |  |  |  |  |

☑ Are wall distances to the unit within the range

☑ Does steam hose have a slope of 5-10%?

Is condensate hose installed with a loop of min. 200 mm?

☑ Is steam manifold positioned correctly?

☑ Are all bolts and clamps tightened?

✓ Is steam manifold installed horizontaly?

✓ Are all sealings installed?

☑ tAre the three holes in the top side of the housing not

covered?

### 6. Water Installation

**Warning:** For installation, note the following:

- Have all work performed by a professional.
- Disconnect power supply prior to installation. Obey regulations of local public utilities.
- Verify that necessary safety measures have been taken in compliance with either German Technical and Scientific
  Association for Gas and Water (DVGW) guidelines (DIN
  EN1717) or local regulations to eliminate backflow of polluted water into drinking water treatment facilities. This can
  mean installing a system separator. Within the humidifier,
  two double check valves (58) are located in the water supply lines. They prevent in accordance with DIN EN 61770
   the backflow of water.
- The water supply temperature may not exceed 40 °C.
- Flushed-out water must be able to drain freely.
- The water supply line must have a minimum diameter of DN 12 (3/8").
- If (chemical) additives are present in the humidification water, health risks and/or impaired unit operation cannot be ruled out. Use of additives is not advised unless specifically recommended by the unit manufacturer.
- When employing demineralized water or purified condensate, do not use copper or brass in the supply or drain lines of the HeaterLine unit. These materials can be corroded by demineralized water or purified condensate. Instead, use stainless steel or temperature-resistant plastic pipes.
- Water installation pressure: 1 to 10 bar (100x10³ to 100x10⁴ Pa)
- For water installation please use the water connecting hose that is delivered with the unit.

### 6.1 Water Quality

The HeaterLine Type steam humidifier is designed for use with:

- tap water with a total hardness of max. 18.8°e
- demineralized water (min. conductivity 3µS/cm)
- fully cleaned condensate (min.conductivity 3µS/cm)
- partially softened water

Boiling normal tap water always produces lime. Lime deposits on the surface of the heater elements may reduce their lifetime. We recommend to use a water treatment device in order to prevent scaling.

In case of any questions regarding water treatment devices please contact HygroMatik.

# 6.2 Water Supply (For Operation with Demineralized Water or Purified Condensate)

- » Install a shut-off valve (AV) in the supply hose
- » Install a water filter (WF) if the water quality requires it
- » Make sure that a backflow preventer is installed in the water supply line.

**Note:** Shut-off valve (AV), water filter (WF) and backflow preventer are not provided by HygroMatik.

Install as follows:

- » Check whether the valve strainer has been inserted in the solenoid valve.
- » Screw cap nut (Q) onto the supply connection. Tighten by hand.

The supply connection protrudes from the intermediate tray.

**Note:** Excessive tightening will damage the threads.

» Slide 13mm inner diameter hose (SCH) over the pressure clip (R) and secure with a hose clamp.

# 6.3 Water Supply (For Operation with Tap Water or Partially Softened Water)

- » Install a shut-off valve (SV) in the supply line.
- » Install a water filter (WF) if water quality requires it.
- » Make sure that a backflow preventer is installed in the water supply line.

**Note:** Shut-off valve (SV) and water filter (WF) are not supplied with the unit

- » HygroMatik provides a water hose (56) with a cap nut at both ends which can be used for water installation.
  Install as follows:
- » Screw and tighten the cap nut with its inner seal ring around the water supply screw connection that protrudes from the base.

**Note:** Tightening too much will destroy the fitting. The valve strainer (29) must be placed inside the solenoid valve.

» Use a cap nut (internal thread ¾") with inner seal for a customer-provided water installation.

### 6.3.1 Feed from Holding Tank

If a holding tank will be used to supply water, the "option solenoid valve 0-10bar" must be ordered. Make sure that the feed height is at least 0.5 meter. If the height is less than 0.5 m, insert a feed pump or install the humidifier lower if possible.

### 6.4 Water Treatment

For water treatment system specifications, use the following table.

The figures below assume that the humidifier has been running for 24 hours at 100% output.

| HeaterLine | Max. Water Consumption in over24 h [I] |
|------------|--|
| 6          | 166                                    |
| 9          | 248                                    |
| 12         | 331                                    |
| 18         | 497                                    |
| 24         | 662                                    |
| 27         | 754                                    |
| 30         | 828                                    |
| 36         | 994                                    |
| 45         | 1242                                   |

### 6.5 Water Discharge

**Warning:** Please pay attention to free and non-pressure drainage of the water! During blow down up to 0,3L/s is being drained. For water discharge, we recommend installation of a flexible water drain hose. Humidifier and waste water discharge must be on the same pressure level.

#### Please note:

- Do not bend, shorten or lengthen the drain hose.
- For the discharge line and drain pipe, select materials temperature-resistant up to 95°C.

Install the water drain system as follows:

 Run 250 - 1000 mm length of 1 1/4" drain hose loosely into a drainpipe with a minimum inner diameter of 40 mm.

| Туре    | Drain Hose |
|---------|------------|
| HL 6-45 | 1 x 1 1/4" |

 Slide the drain hose over the pump discharge hose and secure to the cabinet drain connection.

A grounding clip is fixed on the inner surface of the cabinet drain connection. Slide the end of the pump drain hose onto this clip. During blow-down, the grounding clip will be in direct contact with the water and will conduct any residual currents which may appear away from the cabinet.

There is a 3mm-wide gap between the pump drain hose jacket and the inner surface of the cabinet drain connection. If water collects on the base plate, it will flow through this gap into the drainage system.

### 6.6 Checklist

Verify correct system installation using the checklist below:

- ☑ Can flushed-out water drain freely?
- ☑ Have all screws and clamps been properly tightened?
- ☑ Is the water supply line properly flushed out?
- ☑ Has the water installation been performed correctly?

Is the drainage system correctly installed?

Are the water supply and drain lines free of leaks?

**Warning:** Flush out the water supply line before connecting to the solenoid valve, especially when installing a new line. This prevents dirt particles from damaging the solenoid valve.

### 7. Electrical Installation

Warning, Hazardous Voltage! All work related to electrical installation may be performed by authorized personnel only (electricians or professionals with equivalent training). The customer is responsible for checking qualifications. Warning, Hazardous Voltage! Do not connect the steam humidifier to the power grid until after all installation work has been completed. Please obey all local regulations concerning electrical installation.

**Warning:** The electronic components of the humidifier control are very sensitive to electrostatic discharges. In order to safeguard these components during installation and servicing, steps must be taken to protect against ESD.

Warning: For installation, note the following:

- Disconnect power supply prior to installation and secure against restart.
- Verify the absence of electric current.
- Installation or removal of the display and control unit may only be performed when the unit is switched off. See also section "Access to Control."
- Electrical connector cables must be wired by qualified personnel.
- Install electrical connections as specified in the wiring diagrams.
- For units with power ratings over 33 kW, only a permanent connection to a permanent installation is permitted (observe European Directives shown in chapter "EC Declaration of Conformity").
- Ensure that all terminals have been tightened.

### 7.1 Electrical Installation

- » Breakers must have a contact gap of at least 3 mm per pole.
- » Each steam cylinder requires a separate main power supply including main fuses, main breaker, etc.
- » Connect potential equalization inside the unit to the external ground bolt (located on the underside of the cabinet beside the cable connections).

Observe European Directives shown in chapter "EC Declaration of Conformity.

» Install main power supply as follows:

| Type   | Main Power Supply |
|--------|-------------------|
| HL6-45 | 400V/3Phases/N    |

We recommend using a main fuse with medium blow rating (applies only to the mains voltages above.) See table below indicating maximum power consumption corresponding to each type of circuit protection:

| Туре | Power Con-<br>sumption | Fuses        |
|------|------------------------|--------------|
| HL6  | 11,3 A                 | 3x16 A       |
| HL9  | 16,9 A                 | 3x20 A       |
| HL12 | 19,5 A                 | 3x25 A       |
| HL18 | 29,3 A                 | 3x35 A       |
| HL24 | 39,0 A                 | 3x40 A       |
| HL27 | 29,3 A                 | 3x35 A       |
| HL30 | 39,0 A                 | 3x40 A       |
| HL36 | 58,5 A                 | 3x63 A       |
| HL45 | 58,5 A                 | 3x63 A       |
| HL60 | 2 x 39,0 A             | 2 x (3x40) A |
| HL70 | 2 x 58,5 A             | 2 x (3x63) A |
| HL80 | 2 x 58,5 A             | 2 x (3x63) A |
| HL90 | 2 x 58,5 A             | 2 x (3x63) A |

### 7.2 Cable Connections

The table below shows the cable connections provided in HeaterLine steam humidifiers:

| Unit     | Connection | Connection | Connection |
|----------|------------|------------|------------|
|          | M16        | M25        | M32        |
| HL6 - 45 | 4          | 2          | 1          |

Characteristics of metric cable connections:

| Thread  | across-flats<br>dimensions [mm] | for cable diameter [mm] |  |  |
|---------|---------------------------------|-------------------------|--|--|
| M16x1,5 | 19                              | 4,5 - 10                |  |  |
| M25x1,5 | 30                              | 9 - 17                  |  |  |
| M32x1,5 | 36                              | 11 - 21                 |  |  |

### 7.3 Control Connection

**Warning:** Set the control to prevent overly frequent activation and deactivation of the steam humidifier. Main contactors are wearing parts and are guaranteed by the manufacturer for 150,000 cycles. Operation which minimizes activation cycles will extend the life of the main contactors.

### 7.4 Fan Unit

» Connect fan unit as specified in the wiring diagram.

The fan unit is activated/deactivated in parallel with humidifica-

**Note:**Terminals 37 und 38 are supplied with the unit only when the fan unit and humidifier are purchased simultaneously. In other cases (i.e. retrofitting) the fan unit motor phase can be connected to Terminal 2 guided via the auxiliary contact of the main contactor.

Only cables with same diameter are alllowed to be connected to one common clamp.

Terminals Humidifier

# 7.5 Safety Interlock

Between terminal 1 and 2 of the humidifier the so called safety interlock is located. If the safety interlock is not closed the humidifier is not allowed to work.

Any additional safety devices (see below) have to be installed between those terminals. The safety interlock is also used for an On/Off control mode.

There is no jumper between terminal 1 and 2 ex works.

**Note:** Install contact interlocks, i.e. max. hygrostat, vane relay, pressure controller, air interlock etc. in series between Terminals 1 and 2.

**Warning:** It is standard practice for air-conditioning to install a max. hygrostat in the safety interlock (not valid for steam bath applications). The max. hygrostat acts as a safety device in the event of a humidity sensor malfunction and protects against overhumidification.

**Warning:** Contacts laid between Terminals 1 and 2 must be potential free and rated for 230V switches. Terminal 1 is supplied with 230V AC after switching on the humidifier.

## 7.6 Wiring Diagram

Please refer to the wiring diagram in the technical manual supplied with the control used with your humidifier. Every steam humidifier comes with a unit-specific technical manual and a manual for the control. In addition, you will find downloadable wiring diagrams and technical manuals at www.hygromatik.de.

### 7.7 Electrical Installation Checklist

Perform electrical installation checks in compliance with customer site requirements and public power utility regulations:

- Does the mains voltage match the voltage on the name plate?
- Have all electrical connections been made according to the terminal diagram?
- Have all electrical cable and plug connections been properly tightened?
- ✓ Are all electrical plug connections secure?
- ✓ Is the unit grounded?

After this check the unit can be switched on.

**Warning:** The unit must be closed and locked (only for humidifer type HeaterLine). This guarantees that the cover is grounded.

**Note:** For initial operation, control, service, malfunctions, and circuit diagrams, consult the operation instructions for the Hygro-Matik-controls or at www.hygromatik.de.

## 8. Commissioning

**Warning:** This unit is only to be started by qualified personnel.

### Switching off steam humidifier

**Warning:** Before starting up the unit, make sure you know how to switch it off.

- » Switch off unit by setting control switch to "0"
- » Close water supply stopcock valve.

#### Check of electrical wire connections

**>>** 

- » Check that all electrical wire connections, including heater element wire connections, are tight and secure.
- » Check cylinder seating, and if necessary steam and condensate hose clamps.

### **Switching on Steam Humidifier**

- » Switch on main breaker.
- » Open water supply stopcock valve. Operating pressure  $100 \times 10^3$  to  $100 \times 10^4$  Pa (1 to 10 bar overpressure).
- » Switch on unit by setting control switch to "I".
- » Set control of initial operation check to humidity demand.

### The following functions are operating:

- The unit performs a self-test. If the control includes a display, the message "self-test" is displayed.
- If the safety interlock (see also chapter "Safety interlock") is closed, the water inlet solenoid valve opens and feeds water into the steam cylinder.
- If there is a demand for humidity, the main contactor is switched and a few minutes later steam production starts. Initiation of steam production can take up to 20 minutes.

#### Further checks:

✓ Let all electrically-driven operations run to completion.

As soon as the solenoid valve begins replenishing the water periodically, the steam humidifier operates at steady nominal output and the cold start sequence is complete.

- » Monitor the unit and let it operate for 15 to 30 minutes. If leaks appear, switch off the unit.
- » Repair leaks, and in doing so:

**Attention, Hazardous Voltage!** Follow safety instructions for work on live components.

### 9. Maintenance

The HygroMatik steam humidifier is easy to maintain. Nevertheless, inadequate or improper maintenance can lead to operational malfunctions. Perform regular maintenance to give your unit a long life span.

Since steam and condensate hoses are also subject to wear they have to be checked regularly.

**Warning:** When performing maintenance work, please follow these instructions:

- During operation and also for a while after switching off the unit the steam cylinder is hot. Before touching the cylinder, check its temperature.
- Have the unit serviced only by qualified, authorized personnel.
- Obey safety regulations.
- Switch off the unit prior to maintenance and secure against restart.
- After maintenance work, have qualified personnel check that the unit is operating safely.

The steam humidifier's performance and maintenance intervals depend primarily on the existing water quality and the quantity of steam generated. Variable water quality can lengthen or shorten the maintenance interval. Ongoing maintenance intervals can be estimated based on the amount and type of residue found in the steam cylinder. Immediate cylinder maintenance is indicated by:

- a green, blinking LED on the display and operating panel.
- the display reads Service (only with controls of Type Comfort and Comfort Plus).

# 9.1 Maintenance for Operation with Demineralized Water / Condensate

Instructions for maintenance and cleaning intervals are based exclusively on typical, empirically determined values.

| Cycle                              | Maintenance Task  |
|------------------------------------|---|
| 4 Weeks after<br>Initial Operation | Visual check of electrical and mechanical connections.                    |
|                                    | Visual check of water level control.                                      |
|                                    | Visual check of steam cylinder interior.                                  |
| Annually                           | Visual check of electrical and mechanical connections.                    |
|                                    | Visual check of water level control.                                      |
|                                    | Visual check of heater elements / thermo sensor.                          |
|                                    | Visual inspection of interior of steam cylinder.                          |
|                                    | If needed, cleaning of steam cylinder, heater elements and thermo sensor. |

# 9.2 Maintenance for Operation with Tap Water or Partially Softened Water

No precise maintenance intervals can be specified because these always depend on water quality and quantity of steam generated. It is advisable to adjust the frequency of maintenance to the specific operational application.

HYGROMATIK recommends to open and check the steam cylinder two weeks after commissioning. Ongoing maintenance intervals can be estimated based on the amount and type of residue found in the steam cylinder.

### **Blow-Down Cycles**

The vaporization process causes mineral (calcium) deposits of different compositions to settle in the steam cylinder. Part of this solid build-up is removed through periodic blow-downs and fresh tap water refills with the aid of the HygroMatik SUPER FLUSH flushing system.

The SUPER-FLUSH system generates a whirlpool effect in the strainer basket, intensifying removal of calcium particles during blow-down.

### Water quality

When using tap water, note that cleaning intervals shorten as the carbonate hardness level in the water increases. As a general rule, it is preferable to operate the unit with fully demineralized water. Operation will not be affected by mineral deposits and flushing losses will be minimized.

**Note:** If desired, maintenance intervals can be lengthened by moderately increasing blow-down rates. Please consult Hygro-Matik.

### 9.3 Access to Control Unit

- » Remove cover (or electric compartment cover) and lift display panel (A) out of its guide.
- » Turn display panel (see drawing) and hang display panel on the humidifier cabinet (B) by placing the two guide pins in the two front guides.

» The PCB (C) is now accessible.

**Danger, Hazardous Voltage:** Switch off unit before installing or removing the display plate.

# 9.4 Cleaning the Coarse Strainer in the Cylinder Base

#### Removal

- » Shut off water supply.
- » Drain steam cylinder by setting main switch to Pos II.
- » Disconnect power supply and secure against restart (set main switch to Pos 0, switch, remove main fuse and control fuse F1). Verify the absence of electric current.
- » Remove connector plug for steam cylinder lead.
- » Twist and remove star screw on the steam hose adapter.
- » Remove clip on the steam hose adapter (2).
- » Push the steam hose adapter up out of the cabinet and secure with the clip.
- » Undo clamping belt.
- » Lift steam cylinder (9) out of the base (11).

Warning: When lifting the cylinder be aware not to damage the heating element cable.

- » Remove cylinder base o-ring (13).
- » Lift strainer insert (12) out of the base using the two access holes on the side.
- » Remove all deposits from the coarse strainer.
- » Keep coarse strainer clean with mechanical utilities.
- » Check base for deposits and remove if necessary. Especially the passes of the hose connections should be checked.
- » Insert coarse strainer and position correctly by clicking the cut-out into place in the clip.

### **Assembly**

- » Thoroughly clean o-ring seating in cylinder base. No calcium residue can remain behind on the seating.
- » Moisten new cylinder base o-ring and insert in base.
- » Remove o-ring (4) from the steam hose adapter (2).
- » Moisten o-ring fluid and place on the upper part of the cylinder collar on the cylinder cover (5).
- » If necessary, replace o-ring seal between cylinder (9) and cylinder cover.

#### To do this:

- » Loosen clamping belt and lift off cover.
- » Remove o-ring (15).
- » Insert new o-ring, replace cover . Close clamping ring.

**Warning:** To avoid harming fingers during closing of the clamping ring, make sure that your fingers are not in the closing range.

» Push steam cylinder back into base with a gentle twisting motion.

**Warning:** When inserting the cylinder be aware not to damage the heating element cable

**Note:** The information sticker "hot surface" must be positioned at the front.

- With a gentle turning motion, put adapter (2) over the oring on the steam outlet and fix it with the star screws.
- » Slide clip between adapter and cabinet.
- » Close clamping belt.
- » Attach steam cylinder connector plug.

- » Switch breaker back on.
- » Open water supply.
- » Switch on unit and check for leaks after 15-30 minutes of operation.

If leakage occurs, switch off power supply and repair the leaks, following safety instructions for work on live components!

## 9.5 Cleaning Steam Cylinder

#### Removal

- » Close off water supply.
- » Drain steam cylinder (9) by setting main switch to Pos II.
- Disconnect power supply and secure against restart (switch off control switch, remove main fuse and control fuse F1).
- » Verify absence of electric current.
- » Remove steam cylinder as described in section "Cleaning Coarse Strainer in Cylinder Base."
- » Open cylinder clamping ring (7) and lift off cover (5) with heater elements (8).

### Cleaning

When using mineral deposit removers or cleaners to clean the cylinder and heater elements, make sure you thoroughly rinse the unit before returning reassembling it. Use mineral deposit removers **only** for cylinder and heater elements.

**Note:** Overly strong mechanical cleaning can damage the cylinder / heater elements.

» Remove all deposits. However, small amounts of scale deposits on the heater elements (8) are harmless.

### **Assembly**

» Install cylinder (9) as described above in section "Cleaning Coarse Strainer in Cylinder Base."

# 9.6 Cleaning connection hoses, cylinder base and nozzle

All connection hoses should be free of deposits and in good conditions.

Please check all connections of the cylinder base (11) for deposits and remove if neccessary.

When operating with partially softened water or tap water scale can be discharged with the steam flow and can settle in the nozzle (3) that is in the steam hose adapter. Therefore, this nozzle should be tested regularly as part of the general maintenance review and cleaned if necessary.

## 9.7 Replacing Heater Elements

#### Removal

- » Close off water supply.
- » Drain steam cylinder (9) by setting main switch to Pos II.
- » Disconnect power supply and secure against restart (switch off control switch, remove main fuse and control fuse F1).
- » Verify absence of electric current.
- » Remove steam cylinder as described above in section "Cleaning Coarse Strainer in Cylinder Base."
- » Open cylinder clamping ring (7) and lift off cover (5) with heater elements (8).
- » Detach connecting cable for the heater element in question. Mark these two terminals.
- » If necessary, remove the capillary tube from the thermo sensor by detaching the retainer clips.
- » Detach the heater elements from the cover by removing the nut from the pressure plate (16).
- » Clean the sealing surface on the underside of the cover around the area where the new heater element will be installed.

### Installation

- » Install new heater element, replacing the parts in the correct sequence according to the diagram, and screw nut with a torque of 5Nm onto the pressure plate.
- » Insert the heater element's connecting cable into the two marked terminals and tighten. Polarity of (heater element) connecting cable is not important.
- » If necessary: Install capillary tube on the thermo sensor

- using retainer clips.
- » To proceed further, follow the steps described above in section "Cleaning Coarse Strainer Cylinder Base."

# 9.8 Replacing Thermo Sensor (for Heater Element)

#### Removal

- » Close off water supply.
- » Drain steam cylinder (9) by setting main switch to Pos II.
- » Disconnect power supply and secure against restart (switch off control switch, remove main fuse and control fuse F1).
- » Verify absence of electric current.
- » Remove steam cylinder connector plug.
- » Remove star screw from the steam hose adapter (2).
- » Remove clip on steam hose adapter.
- Push the steam hose adapter up out of the cabinet and secure with clip.
- » Loosen clamping belt.
- » Lift steam cylinder out of the base (11).

**Warning**: When lifting the cylinder be aware not to damage the heating element cable.

- » Remove thermo sensor cap.
- » Loosen thermo sensor screw terminals and detach wires.
- » Loosen clips of capillary tube.
- » Disconnect capillary tube from the heater elements (8).
- » Remove locking nut (R) of thermo sensor (O)
- » Remove thermo sensor.

O: Thermo Sensor

P: Unlocking Button for Thermo Sensor

Q: Seal

R: Mounting Counternut

Warning: Do not bend the capillary tube of the thermo sensor!

#### Installation

- » Install heater element and thermo sensor. Do not screw the nut in too tightly!
- » Neatly connect the capillary tube to the heater element. Having humidifiers with two or more heating elements the capillary tube is connected to two heating elements.
- » To proceed further, follow the steps described above in section "Cleaning Coarse Strainer in Cylinder Base."

### 9.8.1 Cleaning of the Control Cylinder

The control cylinder (6) monitors the water level. When cleaning the steam cylinder the control cylinder should also be cleaned. Therefore:

- » Loosen the four top screws that interconnect floating switch and control cylinder housing.
- » Pull out floating switch and clean it carefully.
- » Take off sealing and clean it.

**Note:** The rod assembly may not be lubricated.

- » Clean the sealing surface it the control cylinder housing.
- » For installation mount the a.m. components in reverse order.

# 9.9 Unlocking of a Released Thermo Sensor (for heater element)

If a thermo sensor (for heater element) has released due to a too high temperature the blue button (P) is on the same level as the top of its holder. Additional the control reports a failure "thermo sensor activated". After the system has cooled down the release button (P) can be unlocked by pressing it down a few millimetres.

# 9.10 Unlocking of a Released Thermo Sensor (for Solid State Relay)

If a thermo sensor (for solid state relay) has released due to a too high temperature (>100°C +/- 5°K) the control reports a failure "thermo sensor activated". After the system has cooled down the release pin (that lays between the both plain connectors) can be released by pressing it carefully down until there is a klick sound.

# 9.11 Unlocking of a Released Thermo Sensor (cylinder cover)

If a thermo sensor (for cylinder cover) has released due to a too high temperature (>105°C +/- 5°K) the control reports a failure "thermo sensor activated". After the system has cooled down the release pin (that lays between the both plain connectors) can be released by pressing it carefully down until there is a click sound. This thermal switch is used for overall control of the radiator (principle: double check) and can only be triggered if there was a significant overheating.

If this thermal switch has tripped, the heater elements must be replaced.

## 9.12 Cleaning Blow-Down Pump

- » Close off water supply.
- » Drain steam cylinder by setting the main switch to Pos II.
- » Disconnect power supply and secure against restart (switch off control switch, remove main fuse and control fuse F1).
- » Verify absence of electric current.

- » Detach electrical connector from the pump (10).
- » Detach union adapter (E) from the pump.
- » Remove screws (G) and take the pump out of the base (11).
- » Open pump (bayonet lock).
- » Remove all residue from the drain hoses and pump (possibly replace o-ring (A)).
- » Assemble pump.
- » Moisten o-ring (C) and place in the side connection of the base.
- » Push pump into the base and secure tightly with screws (G).
- » Moisten o-ring (D) and place on the side connection of the pump.
- » Slide union adapter (E) over the side connection of the pump.
- » Connect electrical connector to the pump (polarity not specified).
- » Open water supply.
- » Switch on unit and check for leaks after 15-30 minutes of operation.

If leakage occurs, switch off power supply and repair the leaks, following safety instructions for work on live components!

# 9.13 Removing Inlet Solenoid Valve and Cleaning Fine Mesh Filter

#### Removal

- » Close off water supply.
- » Drain steam cylinder (9) by setting main switch to Pos II.
- » Disconnect power supply and secure against restart (switch off control switch, remove main fuse and control fuse F1).
- » Verify absence of electric current.
- » Remove cylinder as described above in section "Cleaning Steam Cylinder."
- » Seal off water supply and remove screw joint from fresh water connection (L).
- » Detach connector hoses (G) from base (11) and mark a position.
- » Remove electrical connectors from double solenoid valve (H) and mark position.
- » Remove solenoid valve mounting screws (I).
- » Take the solenoid valve out of hole.

### Cleaning

» Remove fine mesh filter (K) from the solenoid valve and clean.

#### Installation

- » Place solenoid valve with seal in the hole in the unit cabinet.
- » Secure solenoid valve tightly with screws (I).
- » Attach fresh water connection (L).
- » Connect elecrical cable to the double solenoid valve. Take care to position correctly.
- » Attach connector hose (G) to the base by using clamps (M)..
- » Install cylinder as described above in section "Cleaning Steam Cylinder".
- » Open water supply.
- » Switch on unit and check for leakage after 15-30 minutes of operation.

If leakage occurs, switch off power supply and repair the leaks, following safety instructions for work on live components!

# 9.14 Checking Cable Screw Connections, Heater Element Wires

- » Check that all cable screw connections are securely tightened
- » Ensure that heating element cable is not dammaged.

**Warning:** Loose cable connections cause excessive contact resistance and overheating of contact surfaces.

## 9.15 Operational Check

- » Start up the unit and operate for a few minutes, ideally at maximum output..
- » Check safety devices.
- » Check hose connections for possible leaks.

## 9.16 Dismantling

Once the steam humidifier will no longer be used, dismantle (demolish or scrap) it by following the installation procedures in reverse order.

**Warning:** Dismantling of the unit may only be performed by qualified personnel. Electrical dismantling may only be performed by trained electricians.

Obey the safety guidelines in section "Safety Instructions," especially the guidelines for disposal.

#### **EC-Declaration of Conformity** 10.

### EG-Konformitätserklärung EC Declaration of Conformity

Hersteller: Manufacture. HygroMatik GmbH

HygroMatik GmbH

Die Anforderungen des Geräte- und Produktsicherheitsgesetzes GPSG) §4 Abs. 1 bis 3 werden eingehalten. Eine vom Lieferzustand abweichende Veränderung des Gerätes führt zum Verlust der Konformität. The requirements of the German Appliance and Product Safety Law (GPSG) paragraph 4 clause 1 to 3 are met. Product modifications after delivery may result in a loss of conformity.

Technical Manager / Quality Manager

Diese Erklärung bescheinigt die Übereinstimmung mit den genannten Richtlinien, ist jedoch keine Zusicherung von Eigenschaften. Die Sicherheitshinweise der mitgelieferten Produktdokumentation sind zu beachten. This declaration certifies the conformity to the specified directives but contains no assurance of properties. The safety documentation accompanying the product shall be considered in detail.
